Common Pitfalls and How to Avoid Them

While keywords are helpful, over-reliance can lead to mistakes. Here are common pitfalls:

1. Assuming keywords always mean the same operation: Words like "more" can mean addition or comparison depending on sentence structure.
2. Ignoring negations or qualifiers: Words like "not" or "except" significantly change the operation.
3. Misinterpreting complex sentences: Break down sentences into smaller parts to understand relationships.

Tip: Always verify that your chosen operation aligns with the overall context and question asked.

Practical Examples of Keyword Identification

Let's analyze a few sample problems to illustrate how recognizing keywords aids in solving:

Example 1

"Sarah has 15 candies. She gives some to her friend, and now she has 9 candies left. How many candies did she give away?"

Keywords:

1. Left / remaining: indicates subtraction
2. "Gives away" suggests subtraction

Solution approach:

Subtract the remaining candies from the initial total: 15 − 9 = 6 candies given away.

Example 2

"A car travels 60 miles in 2 hours. What is its average speed?"

Keywords:

1. Miles and hours: suggests rate
2. "Average speed": division

Solution approach:

Divide total distance by total time: 60 miles ÷ 2 hours = 30 miles per hour.
