System dynamics is a methodological approach used to understand, simulate, and analyze complex systems characterized by feedback loops, time delays, and non-linear interactions. Developed in the mid-20th century by Jay W. Forrester, system dynamics helps managers, policymakers, and researchers visualize how different components of a system influence one another over time. Key Concepts in System Dynamics - Feedback Loops: Circular chains of cause and effect that can reinforce (positive feedback) or balance (negative feedback) system behavior. - Stocks and Flows: The accumulations (stocks) and the rates at which they change (flows) within a system. - Delays: Time lags between actions and their effects. - Non-linearity: Situations where the effect is not

proportional to the cause. Applications of System Dynamics System dynamics is widely used in various fields, including: - Business management and strategic planning - Environmental and ecological modeling - Public policy and social systems - Healthcare systems - Supply chain management The Role of William J.
