Questions & Answers About basic immunology abbas 5th edition

No	Question	Answer
1	What are the primary functions of the innate immune system discussed in Abbas 5th Edition?	The innate immune system provides the first line of defense against pathogens through mechanisms like physical barriers, phagocytic cells, natural killer cells, and the complement system, enabling rapid response to infections.
2	How does the Classical pathway of complement activation differ from the Alternative pathway?	The Classical pathway is activated by antibody-antigen complexes, whereas the Alternative pathway is initiated directly by pathogen surfaces without antibodies, allowing for immediate innate response.
3	What is the role of major histocompatibility complex (MHC) molecules in antigen presentation?	MHC molecules present processed antigenic peptides on cell surfaces to T cells, facilitating adaptive immune responses by enabling T cell recognition of infected or abnormal cells.
4	How do B cells get activated in the context of humoral immunity?	B cells are activated when their B cell receptor binds to a specific antigen and receive additional signals from helper T cells, leading to proliferation and differentiation into plasma cells that produce antibodies.

5	What are the key differences between humoral and cellular immunity as explained in Abbas 5th Edition?	Humoral immunity involves antibody production by B cells targeting extracellular pathogens, while cellular immunity involves T cells that destroy infected cells or coordinate immune responses against intracellular pathogens.
6	Why is understanding immunological tolerance important, according to Abbas 5th Edition?	Immunological tolerance prevents the immune system from attacking self-antigens, thereby avoiding autoimmune diseases and maintaining self-tolerance essential for immune homeostasis.
