3. Competition

Species often compete for limited resources such as food, space, or light. Types of Competition: - Intraspecific (within the same species) - Interspecific (between different species) Implications: - Competition shapes species distribution - Can lead to resource partitioning or competitive exclusion

4. Symbiosis and Parasitism

Some species have close, long-term interactions that may be parasitic. Examples: - Ticks feeding on mammals in NYS - Parasitic plants attaching to host trees Key Concepts: - Parasitism benefits one species at the expense of the other - Symbiosis can be mutualistic, parasitic, or commensal

The activities are tailored to be accessible for middle and high school students, aligning with Next Generation Science Standards (NGSS) and New York State curriculum requirements.

Core Concepts Covered in the Lab

Ecological Relationships Explored

The lab emphasizes several fundamental types of relationships:

1. Mutualism: Both species benefit. For example, pollinators like bees and flowering plants.
2. Commensalism: One species benefits while the other is unaffected. An example is barnacles attaching to whales.
3. Parasitism: One benefits at the expense of the other, such as ticks on mammals.
4. Predation: One species hunts and consumes another, like wolves preying on deer.
5. Competition: Species vie for limited resources, such as food or habitat space.

Understanding these relationships helps students grasp how ecosystems maintain balance and stability.

Biodiversity in New York State

New York's diverse habitats—from forests and wetlands to urban parks—support a wide array of species. The lab highlights:

1. Native plant species like sugar maples and eastern hemlocks.
2. Common animals, including black bears, eastern wolves, and various bird species.
3. Aquatic life such as freshwater mussels and fish.
4. Invasive species that threaten native biodiversity.

Students analyze how biodiversity contributes to ecosystem resilience, nutrient cycling, and human well-being.
